

Frederic Babord

Camera Confinement

User Guide

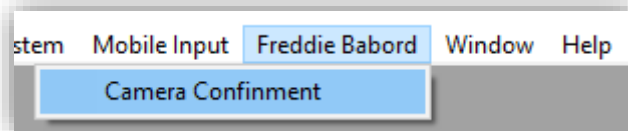

04th December 2016
Version 1.0.0

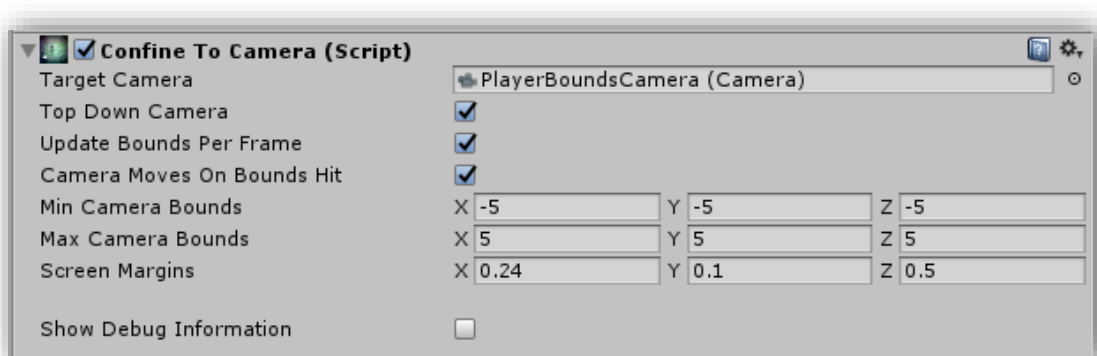

INTEGRATING INTO A CURRENT PROJECT

Select the object that you want to confine to a camera

Under a the “Freddie Babord” drop-down menu select Camera Confinement and it will be added to the currently selected GameObject.

Configure the confinement properties for your specific project within the inspector (shown below)

When in play mode, the objects bounds will be shown in the Scene view by a red bounding box as seen on the front cover.

Property	Description
Target Camera	The camera which the bounds are calculated from. <i>Note: If no camera is assigned, the main camera will be used</i>
Top Down Camera	Enable if the camera is top down as confinement properties are calculated differently.
Update Bounds Per Frame	This will calculate new camera bounds on each frame. Only enable this is the camera moves.
Camera Moves On Bounds Hit	If the target object hits an edge of the camera, the camera will move in that direction
Min Camera Bounds	The smallest values in 3D space the camera can move to
Max Camera Bounds	The largest values in 3D space the camera can move to
Screen Margins	A “safe” area that acts as a border to ensure objects don’t go past this point
Show Debug Information	This displays a the calculated bounds of the camera

THE DEMO SCENE

When you press play, you'll be able to move the player, in this case a sphere and it will also move the camera when it hits the edge until the camera hits its own bounds.
